V250 STYLE LINE® SERIES CASEMENT
V300 TRINSIC™ SERIES PICTURE WINDOW

STEP ONE

The right function

Let's begin by thinking about your windows—whether they will open for ventilation, or if operation takes a back seat to creating a great view or allowing light to flow into your room.

OPERATING STYLE AND SIZE

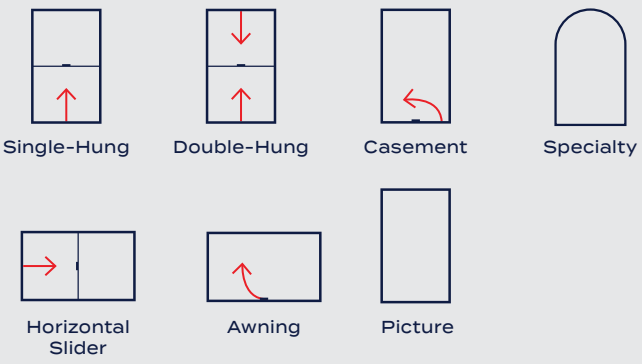

When we talk about an operating style, we are referring to whether or not the window opens to allow ventilation or, is an inoperable picture window that only allows light to come in.

Each room in your home may have a different window need. Consider the following items:

- How large is the wall space?
- What is the outside view?
- Does it face the sun or is it shaded most of the day?
- Does the room need more airflow?
- Is there furniture in front of the window?

Other than local building codes for bedrooms, there is no specific requirement for how much glass you can have in any room. So choose a window that provides enough light while allowing for wall space to handle furnishings.

SIZE UP YOUR OPTIONS

FUNCTION

Casement windows

operate with a simple hand crank, making it an effortless task for anyone to open or close them without lifting, pulling, or pushing.

FUNCTION

Horizontal sliding window

In your kitchen, if the window is over a sink or counter, a horizontal sliding window lets in light and is easy to slide open for ventilation.

CHOOSING THE LOCATION

Think about each room individually. First floor windows may differ from second or third floor windows regarding the size, where they are placed on the wall, and how they open. First choose where you want the window to be, and then think about what you want it to do.

What's outside your windows?

A **horizontal slider** does not protrude outward when open, ideal for windows facing an exterior walkway or patio.

How will you clean them?

Consider **double-hung windows** with tilt-in sashes for second and third-story rooms. You won't need a ladder to clean the exterior of your windows!

Like to hear the rain?

Awning windows are hinged at the top and open upward to provide ventilation during rain, shielding the window opening. Their crank systems allow for easy one-handed operation when opening and closing.

SECURITY AND PRIVACY

New windows not only improve your home's appearance, but they also can help keep your family protected.

- **Transom windows** provide great daylighting options, while allowing you to cover the main windows with blinds or curtains for enhanced privacy.
- Building codes often have specific egress/entry requirements for bedrooms that specify the size and height of an opening in the event of a fire or other emergency. **Casement** and **horizontal sliding windows** can be a good choice for meeting these codes at smaller sizes than some other window operating types.
- A basement window can be a challenge regarding accessibility. **Horizontal sliders** are an excellent way to achieve ventilation in basements and window wells.

For a bathroom window or windows flanking an entry, look for obscure glass options. These provide privacy without the need for window coverings.

EASE OF USE

Operating your windows should be a breeze. Make sure everyone in the home can easily open and close your new windows and consider new innovations like SmartTouch® window locks and handles. With one smooth, single motion you can unlock and open your window, or close and lock it. No pinching, squeezing, or twisting required.

Plus, this technology offers peace of mind security at a glance. When the handle is down, the window is locked. When the handle is up, the window is unlocked.

SmartTouch® locks and handles are available with our V400 Tuscany®, V300 Trinsic™, and C700 Fiberglass Series. Photo represents V400 Tuscany.

AVERAGE CUSTOMER RATING

The right style

Ready to frame your home in a whole new light? Your windows will be a true source of pride, and the first thing people notice on your house.

FRAME MATERIAL

A well-crafted frame can make all the difference in your window performance. In addition to the look of the frame itself, think about what material is best suited for the climate in your region.

Fiberglass

Fiberglass is an innovative option that resists swelling, rotting, and warping. They are exceptionally strong, low-maintenance, and ideal for any style of home or climate. This is a beautiful option that is durable and built to last.

Vinyl

Vinyl frames are known for being energy efficient due to the many air chambers built into the frame and sash. In addition to their insulating properties, vinyl frames are UV resistant, require little maintenance, and are generally more affordable than other frame materials. Vinyl is the most commonly used window material in America and works well in most climates.

Aluminum

Aluminum is a recognized and established frame material that residential architects and builders love. Light yet strong, aluminum windows can be configured into a wide variety of combinations. They are low maintenance and best for non-corrosive environments.

MILGARD Series

MILGARD windows stand up while standing out in three key ways:

1. Engineering, known for industry-leading designs using patented technologies.
2. In-house fiberglass frame production, as well as our unique vinyl formula, produces materials that won't absorb moisture.
3. Insulated glass, delivering superior energy efficiency.

C700 **Fiberglass Series**

Engineered for lasting strength and performance, the next generation of fiberglass.

V400 **Tuscany® Series**

Our top of the line vinyl window with premium features, elegant style and exceptional performance.

V300 **Trinsic™ Series**

Our newest addition to the vinyl line, with a sleek contemporary look for maximum viewing area.

V250 **Style Line® Series**

A clean design and a quality vinyl window that is very affordable.

A250 **Thermally Improved Aluminum**

Featuring a thin, durable frame equipped with a thermal barrier that improves energy efficiency.
(Only available in select markets.)

ARCHITECTURAL STYLE

Windows in the front of your house are typically selected to complement the style of your home. For many people, and many home styles, that means a traditional, symmetrical design. This is particularly important in neighborhoods where existing homes set a general style, or where the appearance is mandated by code. On other sides of the home, you have more freedom.

STEP THREE

The right details

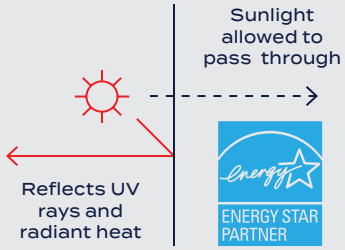

Now it's time to think about the details that can bring immediate and long-term benefits to your new windows. Here are a few things to look at for added beauty, comfort, and peace of mind.

ENERGY EFFICIENCY

According to the U.S. Department of Energy, leaky and inefficient windows and doors account for up to 25 percent of the average household's energy bills. Some sources estimate it being as high as 40 percent.

For the utmost in comfort and energy efficiency, MILGARD customizes our windows and their components to your climate. From the low-e glass coating to the frame design, we engineer the perfect windows for where you live. Look for windows that are ENERGY STAR® qualified.

What is Low-E?
Low-E glass blocks the bad stuff and lets in only the light you want.

Learn more about energy efficiency

WARRANTY

With the dedication to quality that we put into building the most reliable windows in the business, it wouldn't make sense to back them with anything less than a warranty you can count on. MILGARD offers industry-leading warranties depending on the series you choose. You can rest assured in your window selection and enjoy a comfortable home today.
