- Full Lifetime Warranty

Overview
All Standard Aluminum Series Casement and Awning windows are available in both standard and custom sizes to match virtually any design, either new or retrofit.

Components

FRAME
Frame components are made from 6063-T5 aluminum alloy with a structural wall thickness of .125”, and non-structural wall thickness of .062”. The frame is available in clear and bronze anodized finishes with a standard .4” mil coating thickness, and white baked enamel finish. Wide screw spacing on the mechanically joined corners ensure a rigid connection with a consistent dimension. Corners are sealed for added protection from the weather.

Awning and casements are available with either a standard frame with nail-on fin, or with Milgard’s specially designed H-Bar™ frame for wood stop or retrofit application. The standard frame is 2-1/4” in width and the H-Bar is 1-1/4” wide with 5/8” legs that provide a surface area for wood stop installation. Both types utilize 3/4” overall glazing for either fixed or vented sections.

NAIL-ON FIN
An integral nailing fin extends 1” around the perimeter of the standard frame and is used to attach the window into the rough opening. The fin is scored for complete removal for retrofit/wood stop installations. The fin is set back 1-1/16” from the exterior edge of the frame. The optional H-Bar frame has no nailing fin and must be stopped in the opening.

WEEP SYSTEM
The rectangular weep holes are located in the frame sill for effective drainage and moisture control.

GLAZING MATERIAL
AAMA approved glazing tape adheres glass to the fixed and vent frame and seals and cushions the glass. Rigid vinyl setting blocks are used to support the glass-unit, preventing glass slip-page and glass-to-metal contact. Extruded vinyl glazing (snap-in) bead is applied around the exterior edge. Metal bead is available at some locations.

GLASS
Glass options are available in 3/4” overall insulating units in clear, tinted, reflective, obscure, Low-E, and safety glass. Other specialty glass is available upon request.

VENT PANEL
The vent features a clean appearance and rigid construction with mitered and mechanically joined corners. Due to weight limitations of the hinging
system, the vent is restricted to a maximum size of 12 square feet for awnings and 15 square feet for casements.

**HINGES**

Two types of hinges are available with awning/casement, one standard and one for egress application. The stainless steel egress hinge allows a full 90 degree rotation opening. The standard hinge is zinc-plated steel with a sliding brass shoe, which is tension adjustable and is completely concealed when the window is in a closed position. Each vent uses two hinges.

**WEATHERSTRIPING**

For casements and awnings, a dual durometer vinyl bulb seal surrounds the entire perimeter of the vent frame, creating a positive, weather tight seal.

**LOCKING ASSEMBLY**

Friction Hardware

Hand-operated push out latch located on the vent which secures against a polyester strike plate and provides a positive lock and tight seal.

Note: On Casements over 36” in height, two handles are utilized to ensure a tight seal.

**SCREEN**

Screen frames are aluminum, finished with three coats of color matched baked polyester for long-term durability. The screen material is an attractive, low maintenance, gray fiberglass mesh. Screens are installed on the inside of casement and awning windows using four screw-mounted vinyl L-clips that secure through pre-drilled holes in the window frame. A wicket may be inset into the screen, giving access to the lock for vent operation.

### Options

**GRIDS**

Available in 5/8” standard or 1-1/16” sculptured aluminum pro-files sealed between panes.

**WARM EDGE SPACER**

Spacer available in a standard clear finish or optional bronze or champagne finish in the airspace of the insulating glass units. PGG Intercept™ warm-edge steel spacer available in certain regions (standard in some areas.) Contact your Milgard Representative for spacers used in your area.

**STUCCO FIN**

1 3/8” fin setback. Check with your Milgard Representative for availability.

**TEST STANDARDS**

Contact your Milgard Representative for specific test data.

---

CAUTION: The use of petroleum based fuels or solvents as release agents in stucco wall installations or glass cleaning will chemically attack materials used in seals and other components, and voids the Milgard Full Lifetime Warranty. The use of wax based release agents is recommended. Expanding foam for insulation purposes should not be used. Non-expanding foam or loose packed batt insulation is recommended.
Awning and Casement Window

Configurations

Minimum/Maximum Sizes

**FULL AWNING**
- Min 1 1" 6" Max 4 0" 3"

**DOUBLE AWNING**
- Min 3 0" 1" Max 8 0" 3"

**BOTTOM AWNING**
- Min 1 0" 2" Max 4 0" 8"

**FULL CASEMENT (ROTO)**
- Min 1 0" 6" Max 2 0" 5"

**FULL CASEMENT (PUSH OUT)**
- Min 1 0" 6" Max 2 0" 5"

**SINGLE CASEMENT (ROTO)**
- Min 3 0" 1" Max 8 0" 5"

**DOUBLE CASEMENT (ROTO)**
- Min 3 0" 1" Max 5 0" 5"

Available Frame Styles
- 1" Setback
- 1-3/8" Setback
- Standard Z-bar
- No Fin (Block Frame)
- H-Bar (Slope Sill)

NOTE: For engineering approval contact your Milgard representative for any configuration over 40 square feet. Each Milgard Manufacturing plant reserves the right to alter or change sizes and configurations according to location capabilities. Ask your Milgard rep about specialty applications. Windows over 40 square feet shipped open for field glazing. Varies by location.

Not all frame styles available at all Milgard locations. Contact your Milgard Representative for more information.
